[A Concise History of Dutch Mauritius, 1598-1710 Perry J. Moree 1998](#) In 1598 a fleet of five East India ships from the Nether-lands landed on the uninhabited island of Mauritius in the Indian Ocean, which they claimed as a Dutch possession. Being rich in food and water and free of diseases, Mauritius became an important station for outward or homeward-bound ships of the Dutch East India Company, who built a fort, garrisoned the island, began cutting the island's ebony forests, and introduced slaves from Madagascar, some of whom succeeded in escaping Dutch rule and lived as refugees in the interior of the island. Even in the seventeenth century, Mauritius had a multiethnic population. This book describes the vicissitudes of the Dutch on Mauritius and examines the commanders of the island, from the successful Adriaen van der Stel to the despotic Isaac Lamotius, from the disastrous George Wreede to the diplomatic but harsh Roelof Diodati. Appendices list ships calling at Mauritius and the first foreign inhabitants of Mauritius.

[WHO Guidelines on Drawing Blood Neelam Dhingra 2010](#) Phlebotomy uses large, hollow needles to remove blood specimens for lab testing or blood donation. Each step in the process carries risks - both for patients and health workers. Patients may be bruised. Health workers may receive needle-stick injuries. Both can become infected with bloodborne organisms such as hepatitis B, HIV, syphilis or malaria. Moreover, each step affects the quality of the specimen and the diagnosis. A contaminated specimen will produce a misdiagnosis. Clerical errors can prove fatal. The new WHO guidelines provide recommended steps for safe phlebotomy and reiterate accepted principles for drawing, collecting blood and transporting blood to laboratories/blood banks.
