The Rabbit Effect Kelli Harding 2020-11-03 This groundbreaking and life-changing work based on the latest research effectively demonstrates “the profound impact that love, connection, and kindness have on our health” (Mark Williamson, PhD, director of Action for Happiness). When Columbia University doctor Kelli Harding began her clinical practice, she never intended to explore the invisible factors behind our health. But then there were the rabbits. In 1978, a seemingly straightforward experiment designed to establish the relationship between high blood cholesterol and heart health in rabbits discovered that kindness—in the form of a particularly nurturing post-doc who pet and spoke to the lab rabbits as she fed them—made the difference between a heart attack and a healthy heart. As Dr. Kelli Harding reveals in this eye-opening book, the rabbits were just the beginning of a much larger story. Groundbreaking new research shows that love, friendship, community, and our environment can have a greater impact on our health than anything that happens in the doctor’s office. For instance, chronic loneliness can be as unhealthy as smoking a pack of cigarettes a day; napping regularly can decrease one’s risk of heart disease; and people with purpose are less likely to get sick. At once paradigm-shifting and empowering, *The Rabbit Effect* illuminates vital public health research showing kindness in our day-to-day lives can make the “world a healthier, happier place. I recommend this book highly for anyone who wants to live more healthfully” (Christy Turlington Burns, and CEO of Every Mother Counts).

Metabolic Syndrome and Complications of Pregnancy Enrico Ferrazzi 2015-06-24 This book explores the nature of pregnancy and metabolic syndrome as proinflammatory conditions and explains how pregnancy provides a window of opportunity for preventing the lifelong complications of metabolic syndrome, during which key risk factors can be identified and beneficial dietary changes can be implemented. The book’s opening sections discuss inflammation in the context of pregnancy, including the nature of the placenta as a proinflammatory tissue. In the main body, it points to new possible connections to truncal obesity, inflammation, metabolic syndrome, and major obstetrical syndromes, including preeclampsia, gestational diabetes and pre-term delivery. Based on the insights offered by this analysis, the remainder of the book focuses on a variety of nutritional measures and diets that can be of benefit during and beyond pregnancy. Readers will learn how the higher level of compliance with medical instructions during pregnancy can be capitalized on to ensure enduring health benefits for mother and child alike.

Essentials of Psychology Douglas Bernstein 2018-01-01 In a concise and readable 16-chapter format, *ESSENTIALS OF PSYCHOLOGY*, 7th Edition, incorporates the most effective features of the sixth edition along with the latest and most important research findings from psychological science.

Combining extensive pedagogical support with an emphasis on active learning, the text challenges students to learn by doing -- to actively participate and to think about what they are learning rather than just passively read written information. The integrated pedagogical program helps students master the material by supporting the elements of the PQ4R (Preview, Question, Read, Recite, Review, and Reflect) study system. Douglas Bernstein also shows how topics in psychology are interrelated and guides students in thinking critically -- including organizing select research studies around questions to help readers think objectively about research and results. The Scholarship of Teaching and Learning Jacqueline M. Dewar 2018 *The Scholarship of Teaching and Learning: A Guide for Scientists, Engineers, and Mathematicians* shows college and university faculty members how to draw on their disciplinary knowledge and teaching experience to investigate questions about student learning. It takes readers all the way through the inquiry process beginning with framing a research question and selecting a research design, moving on to gathering and analyzing evidence, and finally to making the results public. Numerous examples are provided at each stage, many from published studies of teaching and learning in science, engineering, or mathematics. At strategic points, short sets of questions prompt readers to pause and reflect, plan, or act. These questions are derived from the authors' experience leading many workshops in the United States and Canada on how to do the scholarship of teaching and learning (SoTL). The taxonomy of SoTL questions-What works? What is? What could be?-that emerged from the SoTL studies undertaken by scholars in the Carnegie Academic for the Scholarship of Teaching and Learning serves as a framework at many stages of the inquiry process. The book addresses the issue of evaluating and valuing this work, including implications for junior faculty who wish to engage in SoTL. The authors explain why SoTL should be of interest to STEM (science, technology, engineering, and mathematics) faculty at all types of higher education institutions, including faculty members active in traditional STEM research. They also give their perspective on the benefits of SoTL to faculty, to their institutions, to the academy, and to students.

Innovative Materials for Construction Mariaenrica Frigione 2021-05-05 Most of the typical materials employed in today’s constructions present limitations, especially concerning their durability, in either common or severe environmental conditions, and their impact on the environment. In response to these issues, academic and industrial efforts around the world have been devoted to developing new smart materials that can provide efficient alternatives, improve the energy efficiency of buildings, or can upgrade, repair, or protect existing infrastructures. Different and wide technological innovations are, therefore, quickly fostering advancements in the field of construction materials. A new generation of materials (bricks, cement, coatings, concrete, FRP, glass, masonry, mortars, nano-materials, PCM, polymers, steel, wood, etc.) is gaining a prominent position in modern building technology, since they can overcome various limits and flaws of conventional materials employed in constructions, without neglecting the smart applications of pioneering materials in ancient constructions and historic buildings. Even though the adoption of innovative materials in the construction field has been a successful route in achieving enhanced performance, or even new and unexpected characteristics, some issues have not been completely solved. On top of them, the cost/performance ratio of novel solutions, since their introduction must be convenient, without compromising quality. Other concerns are related to their sustainability, with eco-friendly options, possibly exploiting recycled materials or by-products from other productions, being the most desirable solution. Finally, the use of materials or systems that are unconventional in this field raises the need to update or develop new specifications and standards. This special issue aims at providing a platform for discussing open issues, challenges, and achievements related to innovative materials proposed for the

construction industry.

Trends in Teaching Experimentation in the Life Sciences Nancy J. Pelaez 2022 This book is a guide for educators on how to develop and evaluate evidence-based strategies for teaching biological experimentation to thereby improve existing and develop new curricula. Specific case studies illustrate a comprehensive list of key scientific competencies that unpack what it means to be a competent experimental life scientist. It includes explicit evidence-based guidelines for educators regarding the teaching, learning, and assessment of biological research competencies. The book also provides practical teacher guides and exemplars of assignments and assessments. It contains a complete analysis of the variety of tools developed thus far to assess learning in this domain. This book contributes to the growth of public understanding of biological issues including scientific literacy and the crucial importance of evidence-based decision-making around public policy. It will be beneficial to life science instructors, biology education researchers and science administrators who aim to improve teaching in life science departments. Leisure in Later Life Tania Wiseman 2021-05-15 This book analyses leisure choice as a complex concept, made more complicated in later life than at any other time. The author posits that there are many unanswered questions about the new booming generation of healthy, older people, and this book asks what it is really like to be old at the beginning of the 21st century in the United Kingdom, analysing leisure in older people in the context of the subtle politics of the day to day. Throughout the chapters, the author highlights the often missing depictions of older people who enjoy and enact bold, informed agency as part of their everyday lives. Drawing upon secondary data from the Mass Observation Archive, a social thesis of leisure and ageing emerges that challenges the individualism inherent in 'active ageing.' It is proposed that the idea of 'active ageing' creates complex constraints to leisure as people strive to measure up to cultural expectations. The stories in this book advocate for an appreciation and re-evaluation of passive leisure in later life, and the enjoyment and freedom it can bring. The project is therefore useful to students and researchers of leisure studies, gerontology and sociology of ageing.

Low-Level Radioactive Waste Management and Disposition National Academies of Sciences, Engineering, and Medicine 2017-07-05 The Department of Energy's Office of Environmental Management (DOE) is responsible for the safe cleanup of sites used for nuclear weapons development and government-sponsored nuclear energy research. Low-level radioactive waste (LLW) is the most volumetrically significant waste stream generated by the DOE cleanup program. LLW is also generated through commercial activities such as nuclear power plant operations and medical treatments. The laws and regulations related to the disposal of LLW in the United States have evolved over time and across agencies and states, resulting in a complex regulatory structure. DOE asked the National Academies of Sciences, Engineering, and Medicine to organize a workshop to discuss approaches for the management and disposition of LLW. Participants explored the key physical, chemical, and radiological characteristics of low-level waste that govern its safe and secure management and disposal in aggregate and in individual waste streams, and how key characteristics of low level waste are incorporated into standards, orders, and regulations that govern the management and disposal of LLW in the United States and in other major waste-producing countries. This publication summarizes the presentations and discussions from the workshop.

Selected Papers from the 3rd International Symposium on Life Science Valentin A. Stonik 2020-12-10 This book contains information for specialists in various fields of science. From the point of view of pharmacology, data are reported regarding the effect of echinochrome A and related metabolites from sea urchins on the survival and functional properties of stem cells, which can facilitate ex vivo application of this compound in medicine. For scientists who isolate and establish structures of marine natural compounds, an article devoted to the proof of the microbial origin of a typical metabolite earlier found exclusively from marine invertebrates, 6-epi-monanchlorin, may also be of interest. A range of new marine metabolites was discovered from the both marine invertebrates and marine microorganisms, particularly in marine isolates of fungi. Some marine natural products could be applied to treat such diseases as Parkinson's disease, ischemic stroke, viral infections, and so on. Magnificamide, a new peptide from sea anemones, inhibits porcine and human saliva amylases, showing its probable antidiabetic properties. Application of the genomic approach was discussed in studies on various marine bacteria, producing marine enzymes with unusual specificity. The lectins capable of recognizing glycoforms of different substrates demonstrate the possibility to be used to elaborate new medical diagnostics.

UNESCO science report UNESCO 2015-11-09 There are fewer grounds today than in the past to deplore a North-South divide in research and innovation. This is one of the key findings of the UNESCO Science Report: towards 2030. A large number of countries are now incorporating science, technology and innovation in their national development agenda, in order to make their economies less reliant on raw materials and more rooted in knowledge. Most research and development (R&D) is taking place in high-income countries, but innovation of some kind is now occurring across the full spectrum of income levels according to the first survey of manufacturing companies in 65 countries conducted by the UNESCO Institute for Statistics and summarized in this report. For many lower-income countries, sustainable development has become an integral part of their national development plans for the next 10-20 years. Among higher-income countries, a firm commitment to sustainable development is often coupled with the desire to maintain competitiveness in global markets that are increasingly leaning towards 'green' technologies. The quest for clean energy and greater energy efficiency now figures among the

research priorities of numerous countries. Written by more than 50 experts who are each covering the country or region from which they hail, the UNESCO Science Report: towards 2030 provides more country-level information than ever before. The trends and developments in science, technology and innovation policy and governance between 2009 and mid-2015 described here provide essential baseline information on the concerns and priorities of countries that could orient the implementation and drive the assessment of the 2030 Agenda for Sustainable Development in the years to come.
