Vehicular Engine Design Kevin Hoag 2007-02-05 The mechanical engineering curriculum in most universities includes at least one elective course on the subject of reciprocating piston engines. The majority of these courses today emphasize the application of thermodynamics to engine ef?ciency, performance, combustion, and emissions. There are several very good textbooks that support education in these aspects of engine development. However, in most companies engaged in engine development there are far more engineers working in the areas of design and mechanical development. University studies should include opportunities that prepare engineers desiring to work in these aspects of engine development as well. My colleagues and I have undertaken the development of a series of graduate courses in engine design and

mechanical development. In doing so it becomes quickly apparent that no suitable text-book exists in support of such courses. This book was written in the hopes of beginning to address the need for an engineering-based introductory text in engine design and mechanical development. It is of necessity an overview. Its focus is limited to reciprocating-piston internal-combustion engines – both diesel and spark-ignition engines. Emphasis is specifically on automobile engines, although much of the discussion applies to larger and smaller engines as well. A further intent of this book is to provide a concise reference volume on engine design and mechanical development processes for engineers serving the engine industry. It is intended to provide basic information and most of the chapters include recent references to guide more in-depth study.

Democratization and Market Reform in Developing and Transitional Countries James G. McGann 2010-01-04 This book explores the pivotal role of think tanks in the democratization and economic reform movements by evaluating their overall effect on the transformation process in developing and transitional countries around the world. James G. McGann assesses twenty-three think tanks, located in nine countries and four regions of the world: Chile, Peru, Poland, Slovakia, South Africa, Botswana, the Philippines, Thailand, and Vietnam, that have most impacted political and economic transitions in their respective countries. The author examines the role they played in the process of democratization and market reform during the late 80s and 90s and identifies the importance of think tanks in these processes by evaluating their overall effect on the policymaking process. He argues in the early stages of a transition from an authoritarian regime to an open and democratic society the activities of think tanks are especially critical, and they have provided a civil society safety net to support these fragile democracies. This book will be of interest to students and scholars of political science, democratization, development, economic development and civil society.
