There is something unusual about Dr. Jenna Ramey's brain, a rare perceptual quirk that punctuates her experiences with flashes of color. They are hard to explain: red can mean anger, or love, or strength. But she can use these spontaneous mental associations, understand and interpret them enough to help her read people and situations in ways others cannot. As an FBI forensic psychiatrist, she used it to profile and catch criminals. Years ago, she used it to save her own family from her charming, sociopathic mother. Now, the FBI has detained a mass murderer and called for Jenna's help. Upon interrogation she learns that, behind bars or not, he holds the power to harm more innocents—and is obsessed with gaining power over Jenna herself. He has a partner still on the loose. And Jenna's unique mind, with its strange and subtle perceptions, may be all that can prevent a terrifying reality...

We Want What's Ours Bernadette Atuahene 2014 On countless occasions in history one group with political power has taken property from a less powerful group as part of a larger strategy to dehumanize or infantilize them. The colonial expropriation of property from native peoples, the Nazi confiscation of property from Jews, the Hutu taking of property from Tutsis during and after the Rwandan genocide, and Saddam Hussein's seizing of property from the Kurds in Iraq all typify this enduring phenomenon. In such instances, the dispossessed were subjected to deprivations of property and dignity. Subsequent governments then had to navigate the perilous landscape surrounding the return of land and other property to displaced or decimated populations. They could ignore the fact that people were deprived of their property, or they could rectify it. *We Want What's Ours* is a detailed study of South Africa's attempts to rectify the deprivation of land suffered by thousands of people under the colonial and apartheid regimes. It teaches a critical lesson about these transitions: remedying past wrongs entails more than distributing money or even returning property, because the dispossessed did not just lose their possessions, they also had their dignity taken from them. A comprehensive remedy for these 'dignity takings' involves confronting the underlying dehumanization, infantilization, and political exclusion that enabled the

dispossession. That is, it requires 'dignity restoration' - a remedy based on principles of restorative justice that seeks to rehabilitate the dispossessed and reintegrate them into the fabric of society. South Africa's colonial and apartheid-era land dispossessions are a quintessential example of 'dignity takings', and the post-apartheid government is unique because it has sought to move beyond the more common step of only providing reparations (compensation for tangible losses) and instead has tried to facilitate the restoration of the dignity of the dispossessed. Bernadette Atuahene's detailed research, and extensive interviews with over one hundred and fifty South Africans who participated in the nation's land restitution program, demonstrates what was required for this 'dignity restoration', and how successful it has ultimately been. Rooted solidly in both academic analysis and human experiences, this book serves as an invaluable resource to international organizations, government bureaucrats, policy makers, NGOs, students, and scholars interested in redress for historical injustice, defending property rights, and conflict prevention.

The Immigrant Superpower Tim Kane 2022 "One century ago, in 1921, as the American colossus was emerging on the world stage, a populist backlash against foreign immigration was reinforced by fears of a global pandemic known as the Spanish flu. The backlash was bipartisan, and "emergency" legislation passed the U.S. Congress overwhelmingly. That decision was strategically myopic, undercutting the source of America's surprisingly sudden strength. Indeed, immigrants and the sons of immigrants filled the ranks of the victorious U.S. Army coming home from Europe after World War One, and it was the sons of immigrants who would fill the ranks in World War Two as well. Only during the Cold War era did America's leaders realize that its isolationist immigration laws were harmful. In 2021, the U.S. is stronger than ever on the world stage, yet ironically finds itself in a situation that mirrors that of 1921: populism combined with a global pandemic. Even as Joe Biden's Democratic Party takes over the reins of the federal government, limits on foreign travel are more extreme than ever. Whole countries are all but blockaded, and the emergency justification for keeping out potentially diseased foreigners in the Covid era will be hard to overcome. People, even enlightened voters in great democracies, are not very good at measuring short-term gains against long-term costs"--

Sin in the Second City Karen Abbott 2007-07-10 Step into the perfumed parlors of the Everleigh Club, the most famous brothel in American history—and the catalyst for a culture war that rocked the nation. Operating in Chicago's notorious Levee district at the dawn of the last century, the Club's proprietors, two aristocratic sisters named Minna and Ada Everleigh, welcomed moguls and actors, senators and athletes, foreign dignitaries and literary icons, into their stately double mansion, where thirty stunning Everleigh "butterflies" awaited their arrival. Courtesans named Doll, Suzy Poon Tang, and Brick Top devoured raw meat to the

delight of Prince Henry of Prussia and recited poetry for Theodore Dreiser. Whereas lesser madams pocketed most of a harlot's earnings and kept a "whipper" on staff to mete out discipline, the Everleighs made sure their girls dined on gourmet food, were examined by an honest physician, and even tutored in the literature of Balzac. Not everyone appreciated the sisters' attempts to elevate the industry. Rival Levee madams hatched numerous schemes to ruin the Everleighs, including an attempt to frame them for the death of department store heir Marshall Field, Jr. But the sisters' most daunting foes were the Progressive Era reformers, who sent the entire country into a frenzy with lurid tales of "white slavery"—the allegedly rampant practice of kidnapping young girls and forcing them into brothels. This furor shaped America's sexual culture and had repercussions all the way to the White House, including the formation of the Federal Bureau of Investigation. With a cast of characters that includes Jack Johnson, John Barrymore, John D. Rockefeller, Jr., William Howard Taft, "Hinky Dink" Kenna, and Al Capone, *Sin in the Second City* is Karen Abbott's colorful, nuanced portrait of the iconic Everleigh sisters, their world-famous Club, and the perennial clash between our nation's hedonistic impulses and Puritanical roots. Culminating in a dramatic last stand between brothel keepers and crusading reformers, *Sin in the Second City* offers a vivid snapshot of America's journey from Victorian-era propriety to twentieth-century modernity.

Blue Cats and Chartreuse Kittens Patricia Lynne Duffy 2011-04-01 Imagine a world in which words have colors and sounds have tastes. In his autobiography, Vladimir Nabokov described this neurological phenomenon, which helped inspire David Hockney's sets for the Metropolitan Opera. Richard Feynman experienced it while formulating the quantum theory that won him a Nobel Prize. Sometimes described as a blending of perceptions, synesthesia occurs when only one of the five senses is aroused but two respond. Journalist Patricia Lynne Duffy draws from her own struggles and breakthroughs with synesthesia to help us better understand the condition, while describing some of the major theories surrounding it. An illuminating examination of the world of synesthetes, *Blue Cats and Chartreuse Kittens* is a must-read for science and health buffs, as well as for artists, writers, and creative thinkers—or anyone generally intrigued by the brain, the senses, and perception.

Biologic Markers in Reproductive Toxicology National Research Council 1989-02-01 Does exposure to environmental toxicants inhibit our ability to have healthy children who develop normally? Biologic markers—"indicators that can tell us when environmental factors have caused a change at the cellular or biochemical level that might affect reproductive ability"—are a promising tool for research aimed at answering that important question. *Biologic Markers in Reproductive Toxicology* examines the potential of these markers in environmental health studies; clarifies definitions, underlying concepts, and possible applications; and shows the benefits to be gained from their use in reproductive and neurodevelopmental research.

Cyber Threats and Nuclear Weapons Herbert Lin 2021-10-19 The technology controlling United States nuclear weapons predates the Internet. Updating the technology for the digital era is necessary, but it comes with the risk that anything digital can be hacked. Moreover, using new systems for both nuclear and non-nuclear operations will lead to levels of nuclear risk hardly imagined before. This book is the first to confront these risks comprehensively. With Cyber Threats and Nuclear Weapons, Herbert Lin provides a clear-eyed breakdown of the cyber risks to the U.S. nuclear enterprise. Featuring a series of scenarios that clarify the intersection of cyber and nuclear risk, this book guides readers through a little-understood element of the risk profile that government decision-makers should be anticipating. What might have happened if the Cuban Missile Crisis took place in the age of Twitter, with unvetted information swirling around? What if an adversary announced that malware had compromised nuclear systems, clouding the confidence of nuclear decision-makers? Cyber Threats and Nuclear Weapons, the first book to consider cyber risks across the entire nuclear enterprise, concludes with crucial advice on how government can manage the tensions between new nuclear capabilities and increasing cyber risk. This is an invaluable handbook for those ready to confront the unique challenges of cyber nuclear risk.

Shock Wave-Boundary-Layer Interactions Holger Babinsky 2011-09-12 Shock wave-boundary-layer interaction (SBLI) is a fundamental phenomenon in gas dynamics that is observed in many practical situations, ranging from transonic aircraft wings to hypersonic vehicles and engines. SBLIs have the potential to pose serious problems in a flowfield; hence they often prove to be a critical - or even design limiting - issue for many aerospace applications. This is the first book devoted solely to a comprehensive, state-of-the-art explanation of this phenomenon. It includes a description of the basic fluid mechanics of SBLIs plus contributions from leading international experts who share their insight into their physics and the impact they have in practical flow situations. This book is for practitioners and graduate students in aerodynamics who wish to familiarize themselves with all aspects of SBLI flows. It is a valuable resource for specialists because it compiles experimental, computational and theoretical knowledge in one place.

Twelve Years a Slave Solomon Northup 2021-01-01 "Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt The Battle over Patents Stephen H. Haber 2021-08-06 An examination of how the patent system works, imperfections and all, to incentivize innovation Do patents facilitate or frustrate innovation? Lawyers, economists, and politicians who have staked out strong positions in this debate often attempt to validate their claims by invoking the historical record--but they frequently get the history wrong. The Battle over Patents gets it right. Bringing together thoroughly researched essays from prominent historians and social scientists, this volume traces the long and contentious history of patents and examines how they have worked in practice. Editors Stephen H. Haber and Naomi R. Lamoreaux show that patent systems are the result of contending interests at different points in production chains battling over economic surplus. The larger the potential surplus, the more extreme are the efforts of contending parties-now and in the past-to search out, generate, and exploit any and all sources of friction. Patent systems, as human creations, are therefore necessarily ridden with imperfections. This volume explores these shortcomings and explains why, despite all the debate, historically US-style patent systems still dominate all other methods of encouraging inventive activity.
