Persuasion in Specialised Discourses Olga Dontcheva-Navratilova 2020-12-10 This book examines the concept of persuasion in written texts for specialist audiences in the English and Czech languages. By exploring a corpus of academic research articles, corporate reports, religious sermons and user manuals

the authors aim to reveal similarities and differences in rhetorical strategies across cultures and genres. They draw on Biber and Conrad's (2009) model for contextualising interaction in specialised discourses, Bell's (1997) framework for the analysis of participants roles, Swales' (1990) genre analysis approach for considering genre constraints and Hyland's (2005) metadiscourse model for investigating writer-reader interaction. The result is a book which will appeal to researchers and students in Discourse Studies, especially those with an interest in genre and rhetorical strategies.

The complete project manager Roel Wessels This book is about the how of project management and about how you as a project manager can use a

proactive attitude to stay in control, even during difficult situations. It shows you how to become an influencer of the path to the end result, of your environment, of your team and of your effectiveness. Today's project managers have to meet high expectations.

Challenging goals, a strong focus on cost management and lead times, serving the interests of different stakeholders and many dependencies between subprojects make project management an increasingly complex affair – especially in an environment where change and uncertainty have become the new norm. In addition, the creative abilities of knowledge workers have to be optimally utilised, which requires less hierarchical organisational structures and more multidisciplinary collaboration. Having the right project management skills is therefore essential at virtually every level of an organisation. As a result of these challenges, there is a growing demand for comprehensive methods and the popularity of Agile is on the rise. On the other hand, the increased complexity also results in a need for simplicity. That is what this book is about: going back to the basics, being able to combine useful elements from different methods and focusing on the most important aspect of all: the person behind the project manager! This book contains a wealth of practical descriptions with useful examples and anecdotes. Readers are constantly stimulated to internalise the essence and put it into practice in a manner that suits

their own style and personality. That is the only way to keep at it, be successful and make others believe in you! The book consists of three parts. Part 1 (chapters 1 to 4) describes how to set up and manage a project. The focus is on the basic principles, the essence of taking control, creating structure and using Agile behavior. Part 2 (chapters 5 and 6) explains how to draw up a plan and schedule in small steps, which results in improved completeness, coordination and support. Finally, part 3 (chapters 7 to 10) covers how to manage the project execution: how to realize the path to the final goal with a strict PDCA rhythm, how to evaluate the quality of interim results and how to keep your team and environment motivated.

MALABAR MANUAL by William Logan Commentary

William Logan's Malabar is popularly known as 'Malabar Manual'. It is a huge book of more than 500,000 words. It might not be possible for a casual reader to imbibe all the minute bits of information from this book. However, in this commentary of mine, I have tried to insert a lot of such bits and pieces of information, by directly quoting the lines from 'Malabar'. On these quoted lines, I have built up a lot

of arguments, and also added a lot of explanations and interpretations. I do think that it is much easier to go through my Commentary than to read the whole of William Logan's book 'Malabar'. However, the book, Malabar, contains much more items, than what this Commentary can aspire to contain. This book, Malabar, will give very detailed information on how a small group of native-Englishmen built up a great nation, by joining up extremely minute bits of barbarian and semi-barbarian geopolitical areas in the South Asian Subcontinent.

Solkattu Manual David P. Nelson 2014-08-01 Solkattu, the spoken rhythms and patterns of hand-clapping used by all musicians and dancers in the classical traditions of South India, is a subject of worldwide interest—but until now there has not been a textbook for students new to the practice. Designed especially for classroom use in a Western setting, the manual begins with rudimentary lessons in the simplest South Indian tala, or metric cycle, and proceeds step-by-step into more challenging material. The book then provides lessons in the eight-beat adi tala, arranged so that by the end, students will have learned a full percussion piece they can perform as an ensemble. Solkattu Manual includes web links to video featuring performances of all 150 lessons, and full performances of all three of the outlined small-ensemble pieces. Ideal for courses in world music and general musicianship, as well as independent study. Book lies flat for easy use.

Research Methods in Modern Urban Transportation Systems and Networks Elżbieta Macioszek 2021-04-15 This book presents many valuable research methods useful in conducting research in modern urban transportation systems and networks. The knowledge base in practical examples, as well as the decision support methods described in this book, is of interest to people who face the challenge of searching for solutions to the problems of contemporary transport networks and systems on a daily basis. The book is therefore addressed to local authorities related to the planning and development of strategies for selected areas with regard to transport (both in the urban and regional dimensions) and to representatives of business and industry, as people directly involved in the implementation of urban transportation systems and networks solutions. The methods contained in individual chapters of the book allow to look at a given problem in an advanced way and facilitate the selection of the appropriate strategy (e.g., in relation to the air quality in considering the impact of the atmospheric emission from the urban road traffic, the role of incentive programs in promoting the purchase of electric cars, life-cycle costing decision-making methodology and urban intersection design, but also in

assessing the impact of the socio-financial conditions on the bike-sharing system operation and its implementation in medium-sized cities, etc.). In turn, due to the new approach to theoretical models (including comparison methods of driving errors in a single-lane and multi-lane roundabouts, methods of parking measurements, methods of ensuring the technical readiness of transport companies fleet due to the region's capabilities as well as speed-related surrogate measures of road safety based on floating car data), the book is also of interest to scientists and researchers carrying out research in this area.
